

General Model E2SC at Pack Expo Las Vegas September 23 – 25

If you plan to attend Pack Expo in September, please stop by to see General at Booth C-4140. We will be showing the new Entrada model E2SC with Tridyne net weight scales and Plitek's new E-Series gas relief valve applicator and the VideoJet 6230 thermal transfer overprinter.

The price of the E2SC and other E2 configurations makes them affordable for smaller packaging operations to take advantage of higher outputs, reduced packaging materials costs and reduced labor costs with automatic VFFS packaging.

Plitek's PLI-VALV[®] reel is mounted on the right side of the machine for easy access, and the applicator head is rail mounted to slide out for maintenance. Package size changeovers are made quickly with the Plitek positioner.

The VideoJet 6230 thermal transfer overprinter has a print area range of up to 1.26" X 1.85". Its features are too numerous to describe here. Briefly, it is versatile, easy to operate and prints what you want to see.

Every part of this system is simple, easy to access and easy to maintain. The E2 can be serviced by in-house personnel, an advantage that minimizes downtime and operating costs.

We hope to see you at Pack Expo Las Vegas.
